ABOUT ME

Almost every day we encounter a new problem that needs a solution. It could be anything from a simple math problem, to figuring out how to cure cancer. Solving these type of problems is what I love so much about coding. It enables me to take a language that only a computer can understand and convert that into a program or application, in order to solve real life problems.

TECHNICAL SKILLS

Java - JavaScript - CSS - HTML -
jQuery - Bootstrap - Spring - MySql -
GitHub
Exposure to: - C++ - C# React JS
